

Water consumption

Water consumed during the process of food production is 1000 times greater than the amount of drinking water required to satisfy a human being. The table below lists the litres of water required to produce a selection of everyday commodities.

1 hamburger		2400
1 glass of milk		200
1 egg		135
1 orange		50
1 potato		25
1 tomato		13
